

## DMX-Check

- Use this handy module to check what's happening on your DMX network.
- Ideal for checking the output from DMX controllers and lights.
- Works up to the maximum DMX specification speed
- Displays the number of transmitted channels (1 to 512) and the data value on the selected channel.
- Selected channel incremented/decremented by push-buttons.
- Connection to the DMX network by standard 5-pin XLR connectors.
- Data displayed on back-lit 2x16 LCD
- Requires 7.5 to 9V @ 500mA DC supply
- 115 x 40 x 30 mm
